ARTICLE PAGE

First page of an article

NOTE: Article is based of the Highlight Page Template, but has the following additions:

< Back Link

Each Article page has a back link. Need to be able to enter a link back to a Anchor page. Be great if in the CMS when creating a new Article page, that this link be a drop down that shows all Anchor pages, then be able to choose one as the Article page Parent.

Date Posted

Need this to be a text field that I can enter the date. If you can make it a drop down that has these options:

Posted on:

Revised on:

Then it Auto populate the date when pushed live that would be great. If not open text field

Section Sub Nav Bar

In an article page, this should match the nav bar created for the parent Anchor Page. Be great if this could be done automatically when the Article page is set to a parent Anchor Page

Download link

Some Article pages will have .PDF files that the user needs to download. In the CMS please create a way to set a download link to a file. Ideally like a spot in the CMS that i can upload files to a library and each file have a set link that can be chosen when creating a download on an anchor page.
